# STAT40840: Data programming with SAS

Laura Kirwan

## Lecture 7

# Lecture 7 – Part 2: Combining Data Sets

**7.3 Concatenating Data Sets**

**7.4 Merging Data Sets One-to-One**

**7.5 Merging Data Sets One-to-Many**

**7.6 Merging Data Sets with Nonmatches**

# Objectives - Part 3

- Concatenate two or more SAS data sets. Use the SET statement in a DATA step.
- Change the names of variables. Use the RENAME= data set option.

# Scenario

You were asked to combine the data sets that contain information about Orion Star employees from Denmark and France into a new data set.

# Considerations

Concatenate like-structured data sets, **empsdk** and **empsfr**, to create a new data set named **empsall1**.

**empsdk**

First	Gender	Country
Lars	M	Denmark
Kari	F	Denmark
Jonas	M	Denmark

**empsfr**

First	Gender	Country
Pierre	M	France
Sophie	F	France

**empsall1**

First	Gender	Country
Lars	M	Denmark
Kari	F	Denmark
Jonas	M	Denmark
Pierre	M	France
Sophie	F	France

Both data sets contain the same variables.

# Using a DATA Step

Use a DATA step to concatenate the data sets.  
List the data sets in the SET statement.

```
data empsall1;  
    set empsdk empsfr;  
run;
```

```
SET SAS-data-set1 SAS-data-set2 ... ;
```

- The SET statement reads observations from each data set in the order in which they are listed.
- Any number of data sets can be included in the SET statement.

# Viewing the Log

```
145 data empsall1;  
146     set empsdk empsfr;  
147 run;
```

NOTE: There were 3 observations read from the data set WORK.EMPSDK.

NOTE: There were 2 observations read from the data set WORK.EMPSFR.

NOTE: The data set WORK.EMPSALL1 has 5 observations and 3 variables.

# Unlike-Structured Data Sets

Concatenate **empscn** and **empsjp** to create a new data set named **empsall2**.

**empscn**

First	Gender	Country
Chang	M	China
Li	M	China
Ming	F	China

**empsjp**

First	Gender	Region
Cho	F	Japan
Tomi	M	Japan

The data sets do not contain the same variables.

```
data empsall2;  
    set empscn empsjp;  
run;
```

L7\_D10.sas

## Exercise 6

How many variables will be in **empsall2** after concatenating **empscn** and **empsjp**?

**empscn**

First	Gender	Country
Chang	M	China
Li	M	China
Ming	F	China

**empsjp**

First	Gender	Region
Cho	F	Japan
Tomi	M	Japan

```
data empsall2;  
    set empscn empsjp;  
run;
```

# Compilation

**empscn**

First	Gender	Country
Chang	M	China
Li	M	China
Ming	F	China

**empsjp**

First	Gender	Region
Cho	F	Japan
Tomi	M	Japan

```
data empsall2;  
    set empscn empsjp;  
run;
```

**PDV**

First	Gender	Country

L7\_D10.sas

# Compilation

**empscn**

First	Gender	Country
Chang	M	China
Li	M	China
Ming	F	China

**empsjp**

First	Gender	Region
Cho	F	Japan
Tomi	M	Japan

```
data empsall2;  
    set empscn empsjp;  
run;
```

**PDV**

First	Gender	Country	Region

# Final Results

**empsall2**

First	Gender	Country	Region
Chang	M	China	
Li	M	China	
Ming	F	China	
Cho	F		Japan
Tomi	M		Japan

- **Region** has missing values due to PDV initialization.
- **Country** has missing values due to PDV reinitialization before processing the second data set.

# Scenario

Rename variables in one or more data sets to align columns.

**empscn**

First	Gender	Country
Chang	M	China
Li	M	China
Ming	F	China

**empsjp**

First	Gender	Region
Cho	F	Japan
Tomi	M	Japan

**Rename Region  
to Country.**

# RENAME= Data Set Option

The *RENAME= data set option* changes the name of a variable.

```
data empsall12;  
    set empscn empsjp(rename=(Region=Country)) ;  
run;
```

SAS-data-set (RENAME=(old-name-1=new-name-1  
old-name-2=new-name-2  
...  
old-name-n=new-name-n))

- The RENAME= option must be specified in parentheses immediately after the appropriate SAS data set name.
- The name change affects the PDV and the output data set. It has no effect on the input data set.

# RENAME= Data Set Option

- Multiples variables can be renamed in one or more data sets.

```
set empscn(rename=(Country=Region))  
empsjp;
```

```
set empscn(rename=(First=Fname  
                    Country=Region))  
empsjp(rename=(First=Fname));
```

```
set empscn  
empsjp(rename=(Region=Country));
```

# Exercise 7

Which statement has correct syntax?

a.

```
set emp scn (rename (Country=Location))  
emp sjp (rename (Region=Location));
```

b.

```
set emp scn (rename= (Country=Location))  
emp sjp (rename= (Region=Location));
```

c.

```
set emp scn rename= (Country=Location)  
emp sjp rename= (Region=Location);
```

# Lecture 7 – part 2: Combining Data Sets

**7.3 Concatenating Data Sets**

**7.4 Merging Data Sets One-to-One**

**7.5 Merging Data Sets One-to-Many**

**7.6 Merging Data Sets with Nonmatches**

# Objectives

- Prepare data sets for merging. Use the SORT procedure.
- Merge SAS data sets one-to-one based on a common variable.

# Match-Merging

## One-to-One

A single observation in one data set is related to exactly one observation in another data set based on the values of one or more selected variables.

## One-to-Many

A single observation in one data set is related to more than one observation in another data set based on the values of one or more selected variables.

## Nonmatches

At least one observation in one data set is unrelated to any observation in another data set based on the values of one or more selected variables.

# Match-Merging: Sorting the Data Sets

The data sets in a match-merge must be sorted by the common variable or variables that are being matched.

```
PROC SORT DATA=input-SAS-data-set  
           <OUT=output-SAS-data-set>;  
           BY <DESCENDING> by-variable(s);  
RUN;
```

## Exercise 8

Which of the following BY statements correctly sorts by descending **salary** within **gender**?

- a. by descending salary within gender;
- b. by descending salary gender;
- c. by gender descending salary;
- d. by gender salary descending;

# Scenario

Merge the Australian employee data set with a phone data set to obtain each employee's home phone number. Store the results in a new data set.

**empsau**

First	Gender	EmpID

+

**phoneh**

EmpID	Phone

**empsauh**

First	Gender	EmpID	Phone

# Match-Merging

The *MERGE statement* in a DATA step joins observations from two or more SAS data sets into single observations.

```
data empsauh;  
    merge empsau phoneh;  
    by EmpID;  
run;
```

```
MERGE SAS-data-set1 SAS-data-set2 . . .;  
BY <DESCENDING> BY-variable(s);
```

A *BY statement* indicates a match-merge and lists the variable or variables to match.

L7\_D12.sas

# MERGE and BY Statements

## Requirements for match-merging:

- Two or more data sets are listed in the MERGE statement.
- The variables in the BY statement must be common to all data sets.
- The data sets must be sorted by the variables listed in the BY statement.

# One-to-One Merge

One observation in **empsau** matches exactly one observation in **phoneh**.

**empsau**

First	Gender	EmpID
Togar	M	121150
Kylie	F	121151
Birin	M	121152

**phoneh**

EmpID	Phone
121150	+61(2)5555-1793
121151	+61(2)5555-1849
121152	+61(2)5555-1665

The data sets are sorted by **EmpID**.

# Final Results

**empsau**

First	Gender	EmpID
Togar	M	121150
Kylie	F	121151
Birin	M	121152

**phoneh**

EmpID	Phone
121150	+61(2)5555-1793
121151	+61(2)5555-1849
121152	+61(2)5555-1665

**empsauh**

First	Gender	EmpID	Phone
Togar	M	121150	+61(2)5555-1793
Kylie	F	121151	+61(2)5555-1849
Birin	M	121152	+61(2)5555-1665

## Exercise 9

- Complete program **L7\_E9.sas** to match-merge the sorted SAS data sets referenced in the PROC SORT steps.
- Submit the program. Correct and resubmit it, if necessary.
- What are the modified, completed statements?

# Lecture 7 part 2: Combining Data Sets

**7.3 Concatenating Data Sets**

**7.4 Merging Data Sets One-to-One**

**7.5 Merging Data Sets One-to-Many**

**7.6 Merging Data Sets with Nonmatches**

# Objectives

- Merge SAS data sets one-to-many based on a common variable.

# Scenario

Merge the Australian employee information data set with the **phones** data set to obtain the phone numbers for each employee.

# Considerations

In this one-to-many merge, one observation in **empsau** matches one or more observations in **phones**.

empsau			phones		
First	Gender	EmpID	EmpID	Type	Phone
Togar	M	121150	121150	Home	+61(2)5555-1793
			121150	Work	+61(2)5555-1794
Kylie	F	121151	121151	Home	+61(2)5555-1849
Birin	M	121152	121152	Work	+61(2)5555-1850
			121152	Home	+61(2)5555-1665
			121152	Cell	+61(2)5555-1666

The data sets are sorted by **EmpID**.

# Match-Merging

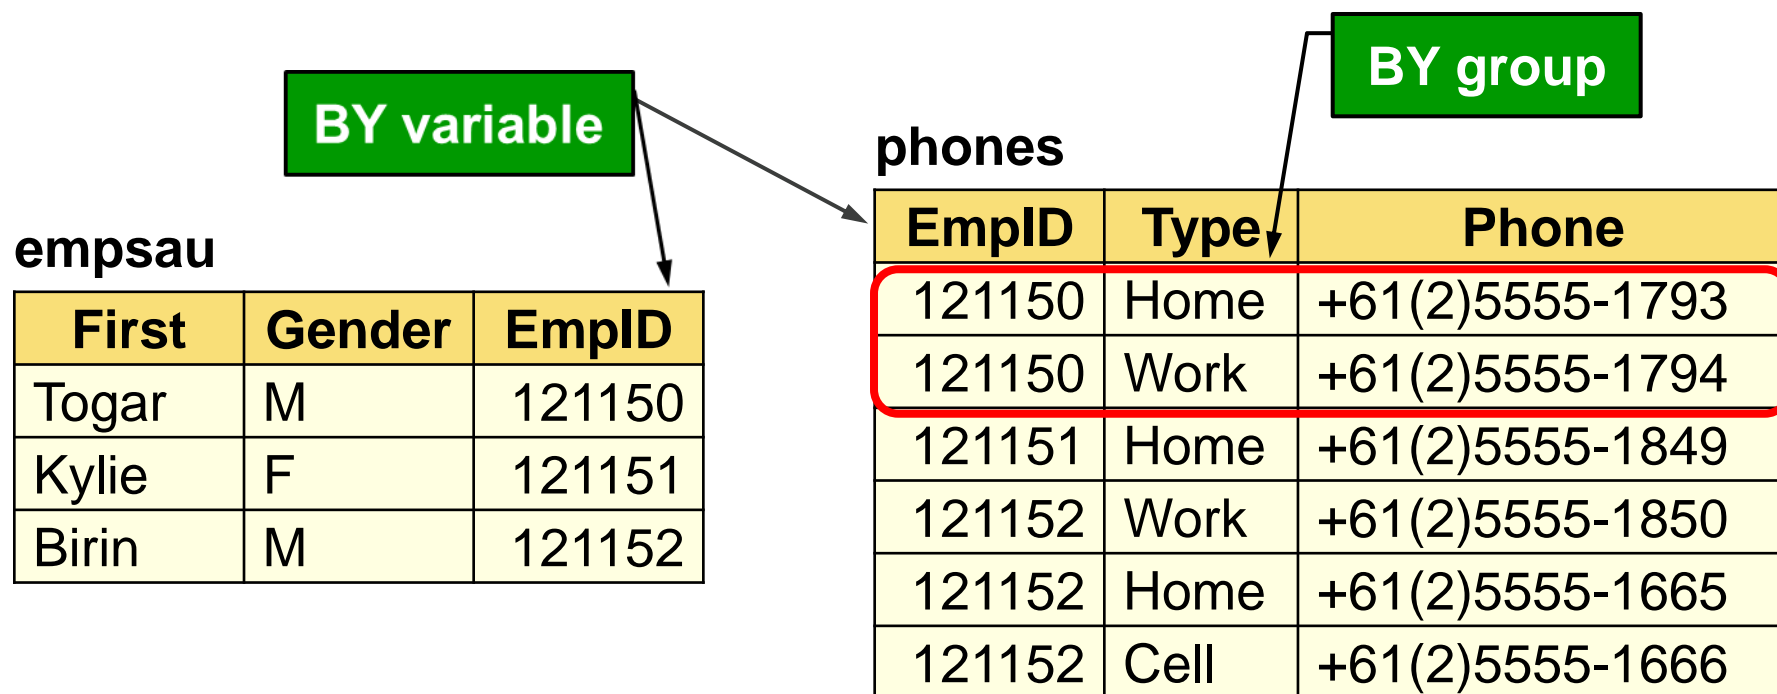

Merge the two data sets by **EmpID** and create a new data set named **empphones**.

```
data empphones;  
    merge empsau phones;  
    by EmpID;  
run;
```

L7\_D13.sas

# Match-Merging

- The common variable is called the *BY variable*.
- The value of the BY variable is the *BY value*.
- A group of observations with the same BY value is a *BY group*.

4	121152	Work	+61(2)5555-1850	Birin	M
5	121152	Home	+61(2)5555-1665	Birin	M
6	121152	Cell	+61(2)5555-1666	Birin	M

- The results are the same as the one-to-many merge.
- The order of variables is different.

# Lecture 7 part 2: Combining Data Sets

**7.3 Concatenating Data Sets**

**7.4 Merging Data Sets One-to-One**

**7.5 Merging Data Sets One-to-Many**

**7.6 Merging Data Sets with Nonmatches**

# Objectives

- Control the observations in the output data set by using the IN= data set option.

# Scenario

An Orion Star manager in Australia requested an inventory of company phone numbers.

# Merge with Nonmatches

There are observations in **empsau** that do not have a match in **phonec**, and some in **phonec** that do not match any observations in **empsau**.

**empsau**

First	Gender	EmpID
Togar	M	121150
Kylie	F	121151
Birin	M	121152

**phonec**

EmpID	Phone
121150	+61(2)5555-1795
121152	+61(2)5555-1667
121153	+61(2)5555-1348

The data sets are sorted by **EmpID**.

# Match-Merging

Merge **empsau** and **phonec** by **EmpID** to create a new data set named **empsauc**.

```
data empsauc;  
    merge empsau phonec;  
    by EmpID;  
run;
```

L7\_D15.sas

# Execution

empsau

First	Gender	EmpID

Birin	M	121152	+61(2)5555-1667
		121153	+61(2)5555-1348

# Scenario

An Orion Star manager requested three phone inventory reports.

- employees with company phones
- employees without company phones
- phones with an invalid employee ID

# IN= Data Set Option

The *IN= data set option* creates a variable that indicates whether the data set contributed to building the current observation.

**MERGE** *SAS-data-set* (**IN=***variable*) ...

*variable* is a temporary numeric variable that has two possible values:

0

Indicates that the data set did ***not*** contribute to the current observation.

1

Indicates that the data set ***did*** contribute to the current observation.

# IN= Data Set Option

MERGE statement examples:

```
merge empsau(in=Emps)  
      phonec(in=Cell) ;
```

```
merge empsau(in=E)  
      phonec(in=P) ;
```

```
merge empsau(in=AU)  
      phonec ;
```

The variables created with the IN= data set option are available only during DATA step execution.

- They are not written to the SAS data set.
- Their value can be tested using conditional logic.

# Matches Only

Add a subsetting IF statement to select the employees that have company phones.

```
data empsauc;  
    merge empsau(in=Emps)  
          phonec(in=Cell);  
    by EmpID;  
    if Emps=1 and Cell=1;  
run;
```
